

CPCA Meaningful Use Resources

The 2015 program year for the EHR Incentive Programs begins on January 1, 2015 for eligible professionals. EPs beyond their first year of meaningful use will have a 365-day EHR reporting period, regardless as to stage.

All eligible professionals are required to have [2014 Edition certified EHR technology \(CEHRT\)](#) to be able to successfully participate in the 2015 EHR Incentive Program. Some EP objectives require that 2014 Edition CEHRT be in place for the entire reporting year, while others may only need to be in place for part of the year.

Objectives Requiring CEHRT Functionality for the Full Year

Objectives that require 2014 Edition CEHRT to be in place for the entire reporting year:

1. Stage 1 Drug-Drug / Drug-Allergy Interaction Checks / Clinical Decision Support / Drug Formulary Check (Menu Measure)
2. Stage 2 Clinical Decision Support for Drug-Drug / Drug-Allergy

Please note: interruption during the reporting period is allowed for reasons such as system maintenance.

Public Health Objectives Flexibility

Some objectives require a test for the first demonstration, and then require ongoing submission. These objectives give eligible professionals 60 days from the start of the reporting period to allow time for things like successfully registering, onboarding with the registry, and submitting a test. This inherently provides some flexibility for getting their 2014 Edition CEHRT in place later and submit ongoing from that point forward:

1. Immunization Registries Data Submission
2. Syndromic Surveillance Data Submission

This flexibility is only allowed if it complies with local and state laws. Some states may require retro-active submission of the data from the beginning of the year if there is a delay in implementation.

Threshold Objectives Flexibility

For all of the threshold objectives (those with a numerator and denominator), the eligible professional must meet the threshold to meet the measure(s) and objective. EPs may not need to have 2014 Edition CEHRT in place for the full year to be able to meet the threshold for these objectives.

If the eligible professional meets the threshold during the reporting period, it meets the measure whether or not the function was in place for the full year.
